

Cloud computing or virtual computing is the new real! If you are not on the cloud you are not cost effective. NetDataVault's intelligent, capex free, revenue generating IT infrastructure solutions boast of a rich portfolio of solutions that transform the ICT infrastructure into smart cloud based solutions that can rapidly and efficiently deploy value added services for both the enterprise and its stakeholders. By moving beyond a product-centric approach towards a service-centric private and hybrid cloud model, you can simplify your IT infrastructure. You can build a virtualized, highly automated environment with pools of shared resources that can be leveraged on demand. In addition, you can safely burst workloads to local and public cloud resources when you need additional computational headroom.

NDV Public Cloud

The NetDataVault public cloud platform includes everything you need to build websites and applications that scale—servers, storage, networking, APIs, and more. Pricing for the NDV public cloud is flexible and you only pay for what you use. Our trusted experts are always here to help you get the most out of your cloud. We can even fully manage your Cloud Servers configuration, including patching, updating, and architecture guidance.

▣ NDV Lite Cloud

Cloud computing is a boon for light businesses - no infrastructure cost, just a browser and a desktop and you have access to your complete IT system anytime, anywhere. With a Managed Cloud account, our team of cloud experts will help you plan, deploy and run your application.

▣ NDV Biz Cloud

If you require complete authority to oversee a collection of all resources pooled together and used on-demand, our business cloud is what you need. Get the ability to commission and scale individual elements like memory, disk space etc., and make operations live on-demand.

▣ NDV Enterprise Cloud

If your company is like most companies, you have been adding servers, storage, and networking devices to keep pace with your business demands. You could be spending upwards of 70 percent of your IT budget on operations and maintenance, which means you are spending 30 percent or less on innovation that is critical to growing your business. NDV's Enterprise Solutions cater to perfectly match IT needs of Large Enterprises with flexible and scalable configurations.

Various customizations options based on workloads are available within the offerings or standalone as per customer requirements. Our team of trusted cloud experts extends support and guidance at every stage of the engagement.

Pricing / Month*	Rs 1500	Rs 2500	Rs 4500

*Excluding taxes

Private Cloud: NetDataVault makes deploying and managing private clouds easy. You can rapidly deploy, and have a fully configured, ready-to-use, private cloud in your own data center or at the NetDataVault facility. Our highly secured and customized private cloud provides you flexibility of control, choice of software and hardware, and maximum data control. What you get is the agility of a public cloud, with additional control and security.

Hybrid Cloud: NetDataVault has built its cloud to be flexible. You can run a NDV private cloud in your data center and connect it to a private cloud or public cloud at NetDataVault. You can choose from various Hypervisors including VM ware, HyperV and slew of open source options. With the flexibility offered you never have to worry about lock-in.

Common Features of NDV Cloud Services
